

# Green Building for the Building Professional

Tuesday & Wednesday  
June 23 & 24, 2009

8:00 am—5:00 pm St.  
George, Utah

Learn how green homes provide buyers with lower energy costs and higher value. This 2-day course for building professionals discusses strategies for incorporating green-building principles into homes without driving up the cost of construction. You will learn how green homes provide buyers lower maintenance, better indoor air quality and better long-term value. Techniques are also discussed for competitively differentiating your home products with increased indoor environmental quality as well as energy and resource efficiency.

## As a graduate of this course, you will be able to:

- Locate and design green building development sites.
- Control moisture and durability for each component of the building envelope effectively.
- Employ resource-efficient materials to achieve comfortable, safe and sustainable buildings.
- Strategize ways to meet, exceed and verify green building energy efficiency requirements.
- Implement indoor and outdoor water conservation practices.
- Achieve indoor air quality.
- Consider green building objectives in a remodeling project.
- Explain a homeowner's and builder's role in effective operation and maintenance of a green home.
- Apply successful business management, marketing and sales strategies to sell green.
